

RAVI ANAND KUMAR

FRONTEND TECH LEAD · FULLSTACK ENGINEER · ANGULAR, TYPESCRIPT, PYTHON

Berlin, Germany | Permanent Residence | ravianand1988@live.com | +49 159 0136 9196 | [LinkedIn](#) | [GitHub](#) | [Stack Overflow](#) | [Portfolio](#)

Summary

Frontend Tech Lead (Fullstack) with 12+ years in software engineering, the last 6+ years at byrd, an e-commerce 3PL, owning the shared Angular and TypeScript platform that four production applications and ~309k lines of TypeScript are built on. Top contributor to byrd's design system and its eight domain packages, original author of its Admin dashboard, and the engineer carrying the inventory, delivery, shipment and product domains across the seller and warehouse dashboards. Ships backend as well as frontend: Python services, plus review and technical guidance on the Android team's Java to Kotlin migration.

Employment

Oct 2019 – Present **byrd technologies GmbH, Berlin, Germany**

Frontend Tech Lead (Aug 2024 – Present) · Senior Frontend Engineer (Oct 2022 – Jul 2024) · Frontend Developer (Oct 2019 – Sep 2022)

E-commerce 3PL: 12 fulfillment centers across the EU and UK, 7M+ products shipped a year. Engineering ~45-50 across Berlin, Vienna and remote.

Tech: Angular, TypeScript, Signals, RxJS, NgRx, Node.js, Python, PostgreSQL, AWS, Docker

- Own byrd's shared frontend platform: federkleid (77 components, 166 icons) plus 8 co-versioned Angular packages, so four apps stay consistent instead of four teams solving the same problem. Led the migration of auth, product, lot and storage state into those packages
- Engineer the inventory, delivery and shipment domains across both dashboards for six years: Customer (88k LOC) for online sellers with Shopify, Amazon, eBay, Mirakl and WooCommerce integrations, and Partner (77k LOC) for warehouse operators. Original author of the Admin dashboard, maintained five years
- One of three engineers on byrd's white-label Returns Portal, its only public-facing surface, letting merchants offer self-service returns under their own brand: shipment lookup, return reason, label generation, in seven languages
- Set frontend engineering standards across six repositories to keep the estate shippable: a CI gate blocking skipped specs across ~9,900 tests, and four Angular majors (v11, v14, v16, v17) keeping it off legacy versions. Wrote byrd's Claude Code plugin, speeding up daily planning and review
- Ship backend as well as frontend: own delivery and inventory API work in byrd's Python warehouse service (Flask, SQLAlchemy), delivered test-first because it's a live system running real warehouse operations. Reviewed and guided the Android team's Java to Kotlin migration
- Interview and hire for the frontend team: 20-25 interviewed, 4-6 hired, a further 4-6 mentored, reducing the risk of being the only person who understands the system. Shape API contracts with backend engineers rather than a handover, catching integration gaps early

Oct 2017 – Sep 2019 **Assistr Digital Health Systems GmbH, Berlin, Germany**

Software Developer

Tech: Vue.js, JavaScript, Python, Django, PostgreSQL, AWS, Docker

- Joined AssistMe at inception as one of the first engineers, in a team that grew from 3 to around 10, building a sensor-based care platform for nursing staff in German care homes. Owned design and development of both the backend and the frontend, from early R&D through alpha and beta trials in live care homes
- Built the Django and Django REST Framework backend: REST API endpoints, core domain modules, internal admin panels, and the PostgreSQL data model, deployed on AWS with Docker and CI/CD

- Set the frontend architecture and built the Vue.js/ES6 web app and shared component library test-first with Jest, using Vuetify and SCSS

Aug 2015 – Sep 2017 **AppFlow Solutions, Faridabad, India**

Software Engineer

Tech: C#, ASP.NET MVC, JavaScript, Azure, MS SQL

- Built DIM (Data Input Manager), a web-based intranet application for a US hospitality client (C#/ASP.NET MVC), including the Profit & Loss synopsis module, Azure AD authentication, and automated daily file processing via Azure Logic Apps and Functions

Dec 2013 – Sep 2015 **INF India Pvt. Ltd, Faridabad, India**

Software Engineer Intern

Tech: C#, JavaScript, jQuery, CSS, HTML, MS SQL

- Built RESTful APIs, the web frontend, and the SQL Server database layer (stored procedures, triggers) for a loyalty card management system

Key Skills and Knowledge

FRONTEND	Angular, TypeScript, JavaScript, RxJS, NgRx, Component-Driven Architecture, Design Systems, Storybook, React (side projects)
BACKEND	Python, Node.js, REST APIs, PostgreSQL
CLOUD & DEVOPS	AWS, Docker, CI/CD
TESTING	Karma/Jasmine, Jest, Test-Driven Development, CI Quality Gates
LEADERSHIP	Team Mentoring, Hiring & Onboarding, Coding Standards, Code Quality, Code Reviews
AI-ASSISTED ENG.	Claude Code, GitHub Copilot, LLM Agents & Sub-agents, Custom Dev Tooling/Plugins

Additional Experience

2017 – Present **Family Business ERP - FMCG Wholesale & Distribution**

Independently built, migrated off WinForms, and operated ~90 consumer brands

- Solo-built a WinForms/.NET desktop ERP in 2017 for a regional FMCG wholesale distributor, running inventory, purchase and sales orders, sales returns, and GST invoicing for ~90 consumer brands
- Migrated it module by module to a web app (Angular, ASP.NET Core, EF Core) with zero downtime, running an AI-driven strangler-pattern migration with Claude Code across 15 releases; retired the WinForms app, which is now fully decommissioned, and added RBAC, a test suite and two modules (expenses, ledger) the desktop app never had

Education & Languages

EDUCATION	IGNOU, Master of Computer Applications (2015) · NIIT, Diploma in Software Engineering (2011)
LANGUAGES	Hindi (Native) · English (Fluent) · German (B1, working toward C1)
